

Dropper Seat Post Cable

2019 Norco bikes installed with a Tranz-X dropper seat post and MERIDA bikes installed with a MERIDA branded dropper seat post come with a new style lever on the handlebar.

This year the cable orientation has been reversed from prior models and is cut and crimped at the handlebar lever. This can cause confusion as you may think there is a part missing to install at the base of the seat post as per prior model years. ***The attached image demonstrates how the cable should now be installed at the seat post actuator.***

The seat post manufacturers have confirmed that this is the correct installation when using the new style handlebar lever.
